SunSoul's innovative solutions to skin well-being respond to the growing focus on natural therapies and healthy lifestyle worldwide. Today's enlightened consumer wants quality alternatives to conventional drug-based treatments, and costly, time-consuming medical procedures.

SunSoul's revolutionary recyclable fabric is the first of its kind to selectively amplify healthy light from the sun and deliver it to the skin while blocking the harmful ultraviolet rays.

Science has long known the sun was good for you, but the dangers of UV light made exposure risky – until now. Now the quest for healthy skin can move back outdoors.

SunSoul's advanced patent-pending technology offers clients natural, effective solutions to their skin concerns – aging skin, sun-damaged skin, blemishes – while supporting a healthy, active lifestyle.

SunSoul is a Toronto-based company, made up of a team of globally recognized scientists and dermatology specialists, that aims to be a market leader in light technology to improve the appearance of skin.

yelomöd

RADIANT SKIN

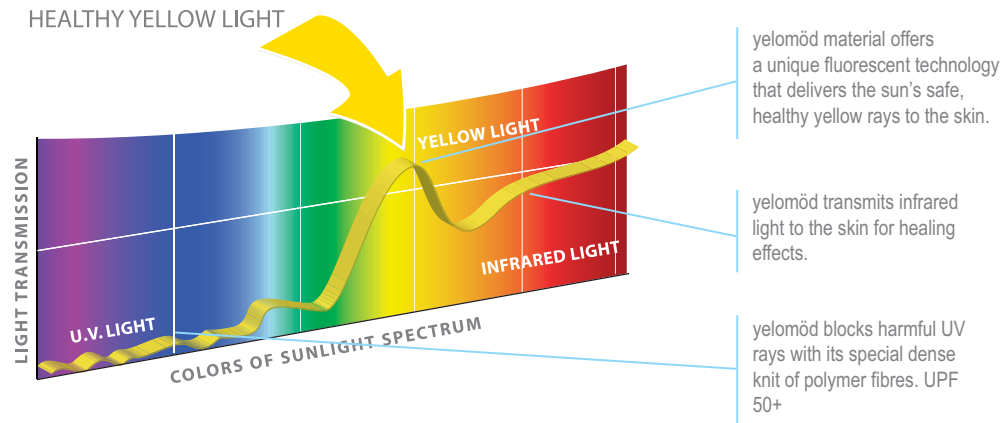

yelomöd is the latest product by the SunSoul team that uses fluorescent technology to deliver the benefits of the sun's healthy yellow rays to your skin while protecting from harmful UV.

Yellow light is well-known to promote skin rejuvenation by smoothing skin, improving skin tone and reducing wrinkles or skin discoloration due to aging or sun damage.

yelomöd offers clients an alternative or perfect compliment to spa visits for conventional treatments, as it helps maintain medical treatment results. Only a few hours in the sun a week wearing yelomöd will provide a dose of yellow light similar to a visit to the professional spa. That's cost effective treatment! It's natural skin therapy on-the-go for the active, healthy lifestyle.

› YELLOW LIGHT TRANSMISSION – through yelomöd to the skin.

yelomöd transmits up to 8mW/cm² of yellow light from the sun to your skin.

Areas of the body not protected from the sun's UV rays by yelomöd shirts or hats must be covered or protected with sunscreen lotion.

blumöd

CLEAR SKIN

blumöd is a stylish high-tech product line that's engineered by SunSoul as a solution for blemished skin. It combines the comfort and utility of high-end sport fabrics with professional light treatment technology. It's skin therapy on-the-go for the active lifestyle.

The blumöd fabric's dense polymer matrix blocks harmful UV rays of sunlight while fluorescent compounds in the material convert UV into beneficial blue light, triggering a process called Photo Dynamic Therapy (PDT). During this process, blue light reacts with oxygen and tiny molecules generated by skin bacteria, called porphyrins, suppressing bacterial growth. Wearing the blumöd clothing in the sun only a few hours a week can improve the appearance of blemished, damaged skin.

> AMPLIFIED BLUE LIGHT – through blumöd to the skin.
